

WHAT IS CLAIMED IS:

1. A striding shank fixing device comprising:

An insert tube of a straight shape for a shank of a parasol or a pole for a flag to be inserted therein, a
5 thumb screw screwing sidewise in said insert tube, a driving block provided inside said insert tube for the end of said thumb screw to push against so as to push against said shank:

A guide tube located to extend horizontally
10 outward from an outer surface of said insert tube, having a plurality of position holes spaced apart equidistantly in a lower side:

An adjusting member having a hole in an upper portion for said guide tube to pass through, a position
15 projection provided on an inner side of said hole to fit in any of said position holes of said guide tube, a female-threaded hole formed in a lower portion for a thumb screw to screw with for pressing a driving strip fixed on an outer surface of said insert tube:

20 Said shank fixing device fixed to stride on a vertical wall, said insert tube and said adjusting member respectively located at two sides of the wall, said adjusting member moved nearer to one vertical surface of the wall to let said position projection to
25 fit in the nearest of said position holes of said guide tube to secure stably said adjusting member at the

adjusted location relative to said guide tube, said thumb screw of said adjusting member screwed inward to press said driving strip to push tightly against a vertical wall surface to secure said adjusting member
5 with the wall so said shank fixing device is secured striding on the wall for supporting the shank of a parasol.

2. The striding shank fixing device as claimed in Claim 1, wherein said insert tube has a lengthwise
10 opening in its wall to function as an entrance for a shank of a parasol to pass through into the interior of said insert tube.
